

About us

Logistic Data Maintenance (LDM) within GTO Logistics Services (LS) validates and uploads master data information into our logistics operational systems.

We are responsible to upload quality assured master data in timely manner into our various systems in order for transportation and invoicing to take place in a correct way.

We are also responsible to inform and train related stakeholders so involved parties know in advance about changes that will occur.

LDM in EMEA is divided into three departments situated in Gothenburg, Ghent and Wrocław. We have close cooperation between our offices and work daily with colleagues in Europe. We use same routines and working methods and by our close cooperation we help each other to improve and use best practices, and contribute to OD/VPS methodology

LDM in Wrocław is now looking for a new member to join our team.

System Implementation Trainee

Position description

- Validate master data into our logistics operational systems (SAP, Atlas, Nii, etc)
- Participate in projects in cooperation with other colleagues in LS
- Development of day to day monitoring of system performance and deviations
